1. Introduction

VSI DEC Test Manager (DTM) Version 4.5-7 for OpenVMS x86-64, IA-64, and Alpha systems is part of VSI DECset Version 13.0-3 for OpenVMS x86-64, IA-64, and Alpha systems.

All versions of VSI DTM check for a license PAK from VMS Software, Inc. You must have a license PAK from VMS Software, Inc. to use this product.

VSI DTM V4.5-3, V4.5-4, V4.5-5, and V4.5-6 were not released.

2. Fixed Issues

VSI DTM V4.5-7 has no code changes from Version V4.5-2 of DTM. What did change is the mechanism by which DTM is built; most of the DECset products now follow a common build and packaging procedure.

DTM V4.5-2 had two bug fixes:

DEC Test Manager (DTM) missing /ERROR= qualifier in DTM\$\$TEST_RUN.COM procedure (VSI BZ 3227)

This procedure is generated whenever a new test collection is created. Prior to this fix, several DCL **OPEN** and **READ** statements did not have any error handling, which could lead to misbehaviour in the event of a disk running out of space or a hardware error.

DTM\$\$TEST_RUN.COM does not properly handle default directories that are search lists (Internal to VSI report)

This problem has been fixed.
